

TREATMENT OF DRY-EYE SYNDROMEAbstract of the Disclosure

5 Dry-eye syndrome and other dryness effects of glandular
malfunction are treated orally by a combination which includes a
source of omega-3 fatty acid, a source of omega-6 fatty acid,
vitamin A, vitamin B6, a source of magnesium and a water-soluble
antioxidant. The preparation preferably is contained in a
capsule. In a preferred form of the preparation and of the
method, the preparation also includes mucin and cold water fish
oil. The fatty acids preferably are contained in blackcurrant
10 seed oil, and the water-soluble antioxidant is preferably in the
form of vitamin C.
